

Tufnol company overview

About us.

Tufnol is a proprietary brand of non-metallic composite materials used to make engineering components for a wide range of uses.

The materials we produce are known as 'synthetic resin bonded laminated composite, and are made from layers of paper, cotton cloth or woven glass fibre cloth, resin impregnated to produce a high pressure laminate product.

It is a strong, hard material, made in a number of different grades with varying properties and uses.

Our range of composites are used in a wide variety of applications, from oil platforms to super cars, large electrical machines to medical instruments, and for critical parts in many of the world's best-known aircraft.

Sectors.

Tufnol's focus on quality and performance has helped to build confidence in a multitude of engineering sectors:

Marine

Construction

Aerospace

Electrical

Offshore

Railway

Key Characteristics.

UK Based

On site manufacturing at our purpose built factory in Birmingham.

Wide Variety

Comprehensive machining of materials for a wide range of customers and industries.

Support

Technical advice and assistance.

Working with you

Working direct with customers to discuss technical needs and support.

Top Quality

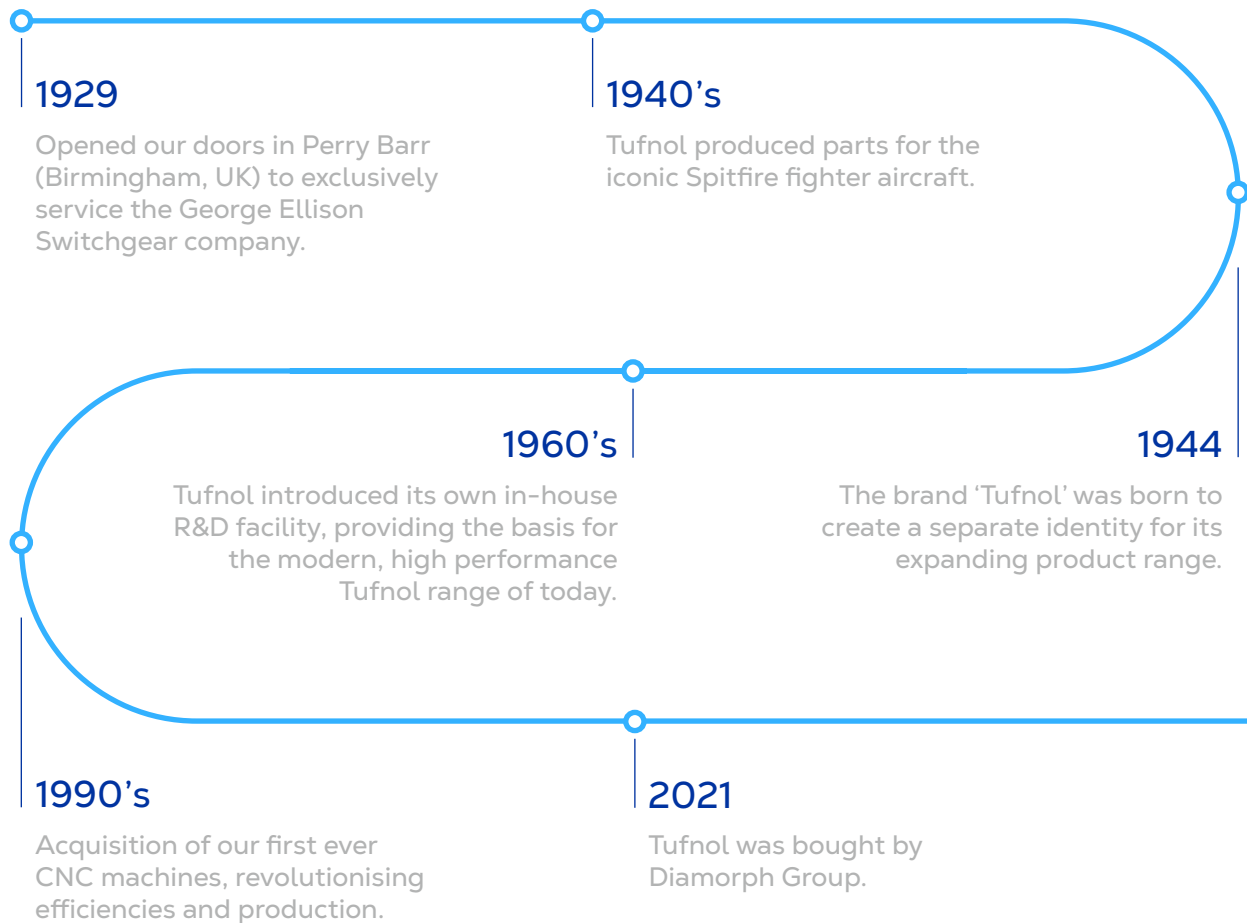

Quality systems ensuring full traceability and approvals.

Progression

A progressive ethos of continuous research and development.

History.

Quality.

Tufnol is at the forefront of engineering composites, laminated resin-based materials for engineering applications. Our reliability at Tufnol is legendary and is based on:

- Fast, efficient service for materials and machined components
- Comprehensive technical capability
- Top quality materials and machined parts from one UK source
- Over 90 years' experience as leader of the laminated composites, resin materials and engineering composites industry
- Many supplier quality accreditations and approvals

Our technical capability combines high performance up-to-date CNC equipment with an unmatched depth of experience in machining laminated composites, resin bonded materials and other engineering composites.
